

SPECTRAL AND RESONANCE PROBLEMS FOR IMAGING, SEISMOLOGY AND MATERIALS SCIENCE

The meeting will explore the connections between micro-local analysis, spectral analysis and scattering theory with different applications domains where bound and quasi-bound states play a prominent role.

(France)

THEMES:

- Inverse Problems and Imaging
- Subwavelenght resonances and applications
- Microlocal analysis, scattering theory and resonances
- Seismology and general relativity

ORGANIZERS:

Raymond Brummelhuis (URCA)

Alexei lantchenko (Malmö University)

Andrea Mantile - (URCA)
